Logos Bible Software offers 12-week internships in software development all year round.

I would greatly appreciate your help identifying students interested in this opportunity, particularly for the summer of 2012. Logos interns work on real-world projects and receive personal mentoring.

We are looking for students who love to write code, want to work with the latest technologies, and share our excitement about providing the best possible tools and technology for anyone who wants to study and teach the Bible.

Logos was founded by programmers, not marketing types. We're driven by a passion for cutting edge technology. We write desktop, mobile, and web applications for Windows, Macintosh, iOS and Android using C#, Objective-C, Java, JavaScript, and many more languages.

We solve amazing problems.

Logos developers are engaged with the latest academic research in information retrieval, the semantic web, information visualization, search technology, cloud computing, and community oriented products. Our applications use graph drawing, multi-dimensional scaling, and 3D graphics along with ancient languages like Hebrew, Greek, Syriac, and Ugaritic.

Nearly a million people in more than 150 countries use Logos Bible Software. We have more than 50 developers on our world-class development team. The company is 230 strong – and growing.

We're fun and we pay well.

Logos located in the beautiful, fun, mountain-and-water-ringed university town of Bellingham, Washington, smack-dab between Seattle, WA and Vancouver, BC. Our intern program provides an amazing experience, taking full advantage of all that Bellingham and the Pacific Northwest have to offer with weekend outings and community events.

We're not your average consumer software company.

Students can learn more at [www.logos.com/interns](http://www.logos.com/interns) or by emailing [devjobs@logos.com](mailto:devjobs@logos.com).

Thank you for your help!
